

ODAŞ ELEKTRİK ÜRETİM SANAYİ TİCARET A.Ş.

Environmental Policy

ODAS conducts its activities adopting Protection of Environment and Human Health as a principle, with a dynamic management approach and in line with current conditions. It continuously enhances its environmental performance, establishes all environmental parameters and undertakes to develop procedures and programs relevant to its activities, developing an environmental management system and demonstrating a dedication to its responsibilities and liabilities towards people and the environment throughout its activities performed within the scope of this principle.

By means of Environmental Management System which is implemented on the basis of Continuous Improvement, the environmental manager carries out activities with respect to Energy Efficiency, Climate change, Air-Water emissions, Consumption & Protection of Natural Resources, Waste Management and activities related to the prioritization of waste categorization and Recycling, in accordance with national and international regulations. We monitor and supervise these activities all the time and examine them in order to ensure their compliance with our Environmental Policy. We set new mitigation targets based on the results obtained through monitoring and supervision of the activities so as to reduce our environmental footprint.

ODAS employs the best techniques of the industry when attaining its targets, makes resolutions on the basis of Continuous Improvement and taking into consideration the opinions of its stakeholders and carries out its activities with the awareness to protect and improve the world where future generations shall live.
